

Bulletin - United States Geological Survey Volume 55-61

By Geological Survey

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1890 Excerpt: .some most interesting questions in speculative geology. The interpretation of the facts will depend upon whether the glacial deposits upon the north and south sides of the Ohio River belong to the same period or to different periods widely separated in time. The question also involves that as to whether the deposits upon the south side of the river were made before or after the Ohio had worn its present valley. Upon the supposition that the long, narrow trough of the Ohio River (described on p. 57) was preglacial, the glacial deposits Upon the south side at Cincinnati imply an ice dam between five and six hundred feet in height. Such an obstruction in the present condition of the valley would set the water back so as to submerge Pittsburgh to a depth of about three hundred feet, and affect the Alleghany River as far up...
