His defense was that when the spheres were devoid of a water film they touched one another, but as they gathered to themselves this water film, they need not necessarily be separated.00005 mm., for the film crowded from the points of closest proximity could be considered as filling up the space that would otherwise have to be considered as void. It must be admitted by the supporters of Grout s molecular attraction theory for plasticity, that he used but a portion of a very fine-grained clay on which to calculate his demonstrating example. If he had taken into consideration the data for the sample of clay as published by him instead of only those for the finer portions, quite different results would have been obtained as is shown in Table XVI. The calculations by which the data in the following table were obtained are, (a)...
