Finally, the lever bar is placed, and the contouring apparatus is ready to commence the application of force at the next sitting. An apparatus for moving the roots of the anterior teeth in a posterior direction is iu the main constructed quite similarly. (See Fig. 6.) The power bar now being used for traction force, the same rigidity is not as necessary as in the other apparatus. I find, therefore, that a No. 16 wire, not flattened in front, is of sufficient size. The other, or lever bar, the force of which acts in the opposite direction to prevent the occluding ends of the teeth from being drawn back, should be as large as No. 18. It should be flattened in the same manner described for the power bar. The upper ends of the upright bars...
